Thermal Management

Product Offering

NEMA Type 12 Filterfan®

Electronics are the lifeblood of your operation.

Innovative filterfans® and filter mats enable increase in airflow while maintaining Type 12 integrity.

Construction

- Patented "Click & Fit" design for tool-free mounting
- Patented hinge system for fast filter mat replacement
- Low profile grills
- Durable heat-resistant plastic construction
- High CFM fans

Finish

Black Grill (Light gray grill optional)

Options

- Replacement filters
- Variable air flow direction
- Voltage options
- Installation up to size 6, air flow rate up to 560 CFM
- Three performance classes, cut-out compatible
- System of protection IP55, NEMA Type 12
- UL, cUL, NITW2 Category and CE approved, CSA pending
- UV-resistance, EMC options

How to Rate CFM in Filterfans®

CFM1 - Fan only rating

CFM2 - Fan with filter and louver rating (free flow)

CFM3 - System rating with exhaust (includes static pressure drop)

Part No.	CFM1	CFM2	CFM3

Wide condenser fin spacing, rugged, long lasting backward curved impeller fans, proper long internal air paths, and hermetically sealed refrigeration circuits coupled with filter kit, corrosion-resistant and voltage options make these indoor Type 12 side mount cooling units reliable and relatively maintenance-free.

230 volt models & RAL 7035 available upon request.

Outdoor Type 3R/4 Side Mount Cooling Units

Electronics are the lifeblood of your operation.

Keep them properly cooled and consistently operating with proper thermal management.

230 volt models &
316 Stainless Steel
available upon request.

Top Mount Cooling Units

Electronics are the lifeblood of your operation.

Keep them properly cooled and consistently operating with proper thermal management.

A milestone in the development of innovative Top Mount Cooling Units features a unique, patented condensate management system, which prevents all condensate from penetrating into the electrical enclosure. The very small installation size also means that you can install your electrical enclosures in a row to save space.

Advantages of Top Mount Cooling Units:

- Product variety: 3 installation sizes and 6 performance ranges
- 4-fold protection against condensate with patented condensate management system
- Tool-free mounting and maintenance with quick-release mounting frame
- Service-friendly: complete cover removable towards the front. Easily accessible filter mats and control elements in front area.
- Energy efficiency: around 20 % saving on energy thanks to the use of more effective, lighter components
- UL certification
- Design and color matching: perfect mixture of functionality and design
- NEMA 12 against enclosure when properly installed

Long service intervals

Larger fin spacing of the condenser coil prevents quick clogging and allows for filterless operation in many industrial environments. Therefore, a significant extension of the service intervals is made possible.

Quick filter replacement made possible by convenient front panel.

Easy access to control board fuses

Easy access to all controls, fuses, etc. with service compartment that is located in the front of the cooling unit. The removal of the hood is not necessary and therefore, quick troubleshooting or replacement is achieved even under limited space conditions.

230 volt models available upon request

Thermostats & Hygrostats

Electronics are the lifeblood of your operation.

Keep them properly cooled and consistently operating with proper thermal management.

Features:

Thermostats are used as temperature controllers and, therefore, for the control of filterfans or electrical enclosure heaters. They are available with N.C. (normally closed) / N.O. (normally open) and changeover contacts. In combination with control cabinet heaters you can ensure, besides temperature control, that the control cabinet is 'artificially' dehumidified, in particular in outdoor applications. That means that the temperature is kept above the dew point so that no water condenses out of the air, which could lead to short circuits due to the formation of condensation.

Hygrostats switch on electrical enclosure heaters or filterfans when a preset relative humidity is exceeded. The relative humidity is kept above the dew point and the condensation of water on electrical components and the corrosion of unprotected sheet metal is prevented. A new electronic combination device unites thermostat and hygrostat in one housing.

Finish:

Molded plastic
RAL 7035

Accessories:

Heaters
Filterfans & Fans

Protection Ratings:

UL Recognized, UR, cUR
Category XAPX2/8
UL File Number: E251765
CE

Configuration:

Din Rail Mount

Part #	UPC Code	Voltage	Max. Current N.C.*	Max. Current N.O.*
AB-TSTATH	70735365383	115 - 230 V	240 V AC / 10 (2)	120 V AC / 15 (2)

*Resistive value in brackets

Units standard in °F. °C versions available upon request.

Radiant & Fan Heaters

Electronics are the lifeblood of your operation.

Prevent harmful condensation with proper thermal management.

Radiant Heaters

Radiant heaters are compact and cover a wide operating range. Mini-heaters and surface temperature-limited heaters are particularly suitable for use in small housings or for the heating of isolated spots in sensitive areas.

Fan Heaters with Thermostat

Ideal for use in larger electrical enclosure. They have an integrated fan that assists the natural convection and provides fast and even distribution of the heat.

Both fan and radiant heaters are used in combination with a thermostat or hygrostat, to avoid excessively low temperatures or excessively high humidity in the enclosure and also help to avoid the formation of corrosion.

Finish:

Extruded aluminum with plastic ends
Stainless Steel

Configuration:

Din Rail Mount
Panel Mount for FHT

Protection Ratings:

UL Recognized, UR, cUR
Category KSOT 2/8
UL File Number: E250750
CE
